Using the internet to get educated about prostate issues is a frustrating experience. On one side, you have sites which are clearly pseudo science quackery and on the other side you have scientific papers which require a background in medicine and statistics to comprehend. The few useful sites, like Dr. Catalona's, are few and far between. Your primary care doctor will refer your questions to your urologist, and your urologist won't have the time to educate you properly. Dr. Carter, a leading urologist at Johns Hopkins, has taken the time to put in one volume a clear, well organized and very complete presentation of every aspect of mens' urologic health. To his credit, Dr. Carter includes lifestyle and dietary measures which can be taken to prevent prostate disease. "An ounce of prevention is worth a pound of cure": it's unusual to see a physician and surgeon offer this information, as doctors are compensated to treat disease, but not to prevent it. Dr. Carter goes through every possible issue that can arise in a man's genito-urinary tract, ranging from "overactive bladder" to prostate cancer, and describes in detail every possible treatment and the pros and cons of each. Even though the author has performed thousands of prostatectomies, he states unequivocally that prostate cancer is highly over treated in this country and explains how "active surveillance", a program he pioneered at Johns Hopkins, can be the best choice for many. The alphabet soup of acronyms you will encounter on this subject are fully decoded, and all the various procedures, their outcomes and their side effects, are fully described. About one man in six will be told at some point in his life that he has prostate cancer.
